1. Introduction

Bitex (BIT) is a decentralized utility token deployed on the Polygon PoS network. The project focuses on providing a transparent, efficient, and scalable digital asset suitable for blockchain-based applications, community-driven ecosystems, and future decentralized finance (DeFi) integrations.

By leveraging Polygon's low transaction fees and high throughput, Bitex aims to deliver a reliable token infrastructure that supports long-term development and ecosystem growth.

2. Token Overview

Token Name: Bitex

Symbol: BIT

Blockchain: Polygon PoS

Token Standard: ERC-20

Contract Address:

0x4296dD83e49d01BB801172d8e938FafE6dcF86A0

Block Explorer:

<https://polygonscan.com/token/0x4296dD83e49d01BB801172d8e938FafE6dcF86A0>

3. Vision & Purpose

The Bitex project was created to serve as a foundational digital asset that can be integrated into various blockchain use cases. The vision of Bitex is centered around simplicity, transparency, and adaptability, ensuring compatibility with both current and future blockchain technologies.

4. Token Utility

- Medium of exchange within decentralized applications
- Community rewards and incentive programs
- Utility token for ecosystem services
- Integration with future DeFi platforms
- Possible governance participation in future protocol upgrades

5. Technology

Bitex is implemented using a standard ERC-20 smart contract on the Polygon network. Polygon was selected due to its scalability, extremely low transaction costs, EVM compatibility, and strong security model backed by Ethereum.

6. Security & Transparency

- Publicly deployed and verifiable smart contract on PolygonScan
- Fully transparent on-chain transactions
- No hidden or undocumented contract functionality

7. Token Distribution

The initial token supply was created at deployment. **No additional tokens can be minted.**

Distribution supports ecosystem development, community growth, liquidity, and long-term sustainability.

8. Roadmap

Phase 1 – Foundation

- Smart contract deployment
- Contract verification on PolygonScan

Phase 2 – Community Growth

- Website launch and optimization
- Community building via Telegram

Phase 3 – Utility Expansion

- DApp integration
- DeFi exploration and potential governance mechanisms
